Information about the training course and the tutors who volunteered to give lectures were given.

5. ISCARSAH Guidelines

The initial draft of the ISCARSAH Guidelines were introduced and discussed. This working group that is composed of Görün Arun, Mustafa Humo, Stephen Kelley, Androniki Miltiadou-Fezans, Marek Sklodowski and chaired by Pere Roca. The initial draft of the Guidelines prepared by Pere Roca is much appreciated and is now being revised by the working group.

Discussions on the Guidelines were held during the presentation (below) by Pere Roca.

6. Initiatives

a. ISCARSAH Newsletter

Maria Margarita SEGARRA LAGUNES's efforts on publishing the ISCARSAH Newsletter is appreciated. And the decision we had taken during 2017 Seoul meeting on "Each ISCARSAH Expert and Associate Member, to keep the membership status, shall write an article for the Newsletter in every two years" is repeated.

b. Maintenance of Website and Social Media (Facebook and LinkedIn)

The efforts of Don Friedman on the website is appreciated. For the proposal of some younger members to take this over, Yohei Endo (Japan) and Savvas Saloustros (Greece) volunteered to take this duty.

c. Expert Database

The information on the number of members who sent their data is given. Out of 81 Expert members 20, 42 Associate Members 12, 11 Honorary Members 2, and 9 Corresponding Members 2 have sent their data for the database

d. Upcoming events

- ICOMOS 2018 Annual General Assembly, in Buenos Aires, Argentina, 04-08 December 2018.
- 7th Structural Engineering World Congress (SEWC2019) on «Architecture and Structure: From Past to Future» will be in Istanbul on 24-26 April 2019.
- 5th International Conference on Structural Health Assessment of Timber Structures (SHATIS'19), that will be in Guimarães, Portugal, on 25-27 September 2019.
- ICOMOS 2019 Annual General Assembly, in Marrakesh, Morocco on 12-18 October 2019.

7. Presentations

The following colleagues made presentations:

- **Julio Vargas Neumann, "Appropriate Reinforcement for Earthen Heritage Constructions in Seismic Areas"**
- **Pere Roca, "ISCARSAH Guidelines"**

The Guidelines will update the ISCARSAH Principles by introducing new concepts and definitions. The Guidelines will address and provide clarity on some critical concepts: for example, concept of "minimal interventions"; "removability v/s reversibility"; satisfying reliability; impact on cultural values; etc. It will introduce the concept of reparability (pre and post natural disaster structural maintainability)

One of the critical aspects included: seismic codes in seismic area. The guidelines will consider the effect of different cultural mores on the decision-making process. There is an open invitation to have more people join the working group. Further technical meetings are proposed to advance in a final document. A specific meeting could be envisaged (for instance during December 2018 in Barcelona).

The following comments were received during the meeting:

- The importance of survey process should be emphasized.
- Guidelines should be useful for all engineers
- Start with critical concepts (minimal interventions, impact on cultural values).
- Need to have an annex with indications for post-disaster survey.
- Proposal by M. Humo to make a check-list will be discussed at a later date.

8. Adjournment
